## WHAT CAN **Gestvul®** DO FOR YOU?

- Designed with scalability and flexibility in mind, it seamlessly integrates and adapts to diverse environments, whether isolated, physically air-gapped, or connected to the Internet.
- Import of vulnerability scan results from Nessus and consolidation of findings. The solution enables the detection and identification of vulnerabilities, as well as the assessment of their severity.
- Integration of vulnerability findings obtained both automatically and manually, for example through penetration testing.
- Optional support services for the management of false positives and non-remediable vulnerabilities.
- Controlled access to vulnerability information through role-based permissions, ensuring data confidentiality and relevance for each type of user.
- Grouping information based on various user-defined criteria, such as geographic location, organizational structure, technology, and more.
- Dashboards and comparative charts for KPI management and monitoring.
- Optional passive vulnerability detection module, providing a preliminary view of the company's security posture without performing active scans.
- Customizable solution for the client, allowing ad-hoc developments for the integration of their corporate tools.

**Gestvul®** is a comprehensive vulnerability management solution that covers all stages of the vulnerability lifecycle, from detection to remediation.

“ It manages vulnerabilities in systems deployed across **21 countries** in Europe and the Americas...”

...Providing service to GMV clients for 20 years. It handles hundreds of thousands of vulnerabilities across thousands of assets.”
