Electronic fare collection systems

AUTOMATIC FARE COLLECTION TECHNOLOGY

GMV offers a wide range of products for ticket sales, validation, and smart transport card management. Our advanced ticketing solutions include technologies such as NFC, EMV payments, QR codes, and account-based ticketing (ABT). Additionally, these solutions integrate seamlessly with back-office tools from other GMV systems, such as AVLS and **GMV Planner**, as well as third-party systems.

Our solutions are specifically designed for the transport market:

- Onboard equipment for ticket validation using various media (contactless cards, QR codes, etc.), ticket sales, EMV payment processing, and smart transport card recharging.
- Station equipment for ticket validation, sales, and smart transport card recharging using various payment methods (cash, bank card, etc.).
- Management applications to control and monitor onboard and station equipment.
- Mobile and web ticketing for ticket storage and purchases.

All our products undergo rigorous testing to ensure they meet the highest standards. GMV has a proven track record of manufacturing innovative products with exclusive, ergonomic designs. Our solutions deliver maximum quality, reliability, speed, and compatibility, while ensuring top performance and low maintenance costs.

GMV customizes its systems to meet each client's specific needs, maximizing business profitability by achieving the following objectives:

- Reduce operating and maintenance costs.
- Provide immediate access to all management data.
- Expand service offerings and strengthen customer loyalty.
- Enhance the client's perception of service quality.
- Drastically reduce fraud using secure technologies.
- Integrate with other onboard elements, whether proprietary or third-party (fleet management system, electronic signage, public address systems, etc.)
